Project Report: Online Shopping Cart for Abaya store.

Program Description:

The Abaya Shopping Application is an online store offering customizable abayas. Customers can choose from various styles, fabrics, colors, and sizes to create personalized garments. The platform features a user-friendly customization process, real-time pricing, and a flexible shopping cart. It streamlines the abaya buying experience, blending traditional designs with modern e-commerce convenience. The application caters to diverse tastes, from classic to contemporary, providing an efficient way for customers to design and purchase abayas tailored to their preferences.

Team members:

1. Joory Abdullah Alzahrani
2. Joory Ahmad Alzahrani
3. Aisha Aladwani
4. Ghala Marzouq Alsaedi
5. Rawan Alzahrani

Program Capabilities:

- **User Interaction:** The store allows users to choose each abaya's size, fabric, and style. Shopping

- **Cart Management:** Customers can add multiple abayas to their cart, review selections, and modify or remove items.

- **Customizable Products:** Abayas are tailored to user preferences, with prices adjusting based on fabric, style, and color. Users can further modify their abayas even after adding them to the cart.

- **Order Processing:** The program collects client information and handles payments via a credit card system.

- **Final Summary:** Users receive a comprehensive order summary and confirmation following successful payment.

User-centric Program flow:

1. **Welcome and Setup**
    - User is greeted with a welcome message.
    - User enters their personal information.
2. **Abaya Customization Process**
    - User begins customizing their abaya by:
        - Choosing a fabric type.
        - Selecting a style.
        - Picking a color.
        - Specifying the size.
    - User has the option to customize multiple abayas.
3. **Review and Modify Customizations**
    - User reviews their customized abayas.
    - Option to make changes if needed.
4. **Shopping Cart Management**
    - User's selections are added to the shopping cart.
    - User can view and modify cart contents:
        - Remove items.
        - Add more items.
        - Review the total price.
5. **Checkout and Payment**
    - When ready to purchase, user proceeds to checkout.
    - User completes the payment process.
6. **Order Confirmation and Post-Purchase**
    - User receives an order confirmation and summary.
    - User can perform post-purchase actions (e.g., track the order).
7. **Exit**
    - User exits the application.

Task Distribution:

Joory Abdullah Alzahrani:

- Managed the overall program structure and interaction flow.
- Handled the **Main** class, which controls the store's processes.
- Handled the **Display Interface**
- Created the **project outline**, which included:
  - Structure of the application.
  - General overview of the classes, their designs, and relationships.
- Handled **whole program debugging**

Joory Ahmad Alzahrani:

- Created the **Abaya** class, managing all aspects of abayas.
- Designed the **UML diagram** for the Abaya class.
- Reviewed and contributed to **exception handling** across the project.
- Identified and reported **bugs** within the program.

Aisha Aladwani:

- Created the **Customer class** to manage customer data.
- Integrated **ShoppingCart** features with the Customer class.
- Reviewed and contributed to **exception handling** throughout the project.
- Reviewed all **Javadoc comments** for accuracy and clarity.
- Identified and reported **bugs** within the program.

.

Ghala Marzouq Alsaedi:

- Created the **ShoppingCart** class to manage user selections
- Managed the **Order** class to track completed orders.
- Contributed to **exception handling** across the project.
- Handled the **project report**
- Identified and reported **bugs** within the program.

Rawan Alzahrani:

- Created the **Payment** class and **CreditCardPayment** class to design and implement the payment processing system for the online shopping cart.
- Conducted **test runs** to validate functionality.
- Identified and reported **bugs** within the program.

UML:

- The diagram is also available as a **PNG** in the project file, as well as a **.puml file** for viewing in **Plant UML plug-in**.

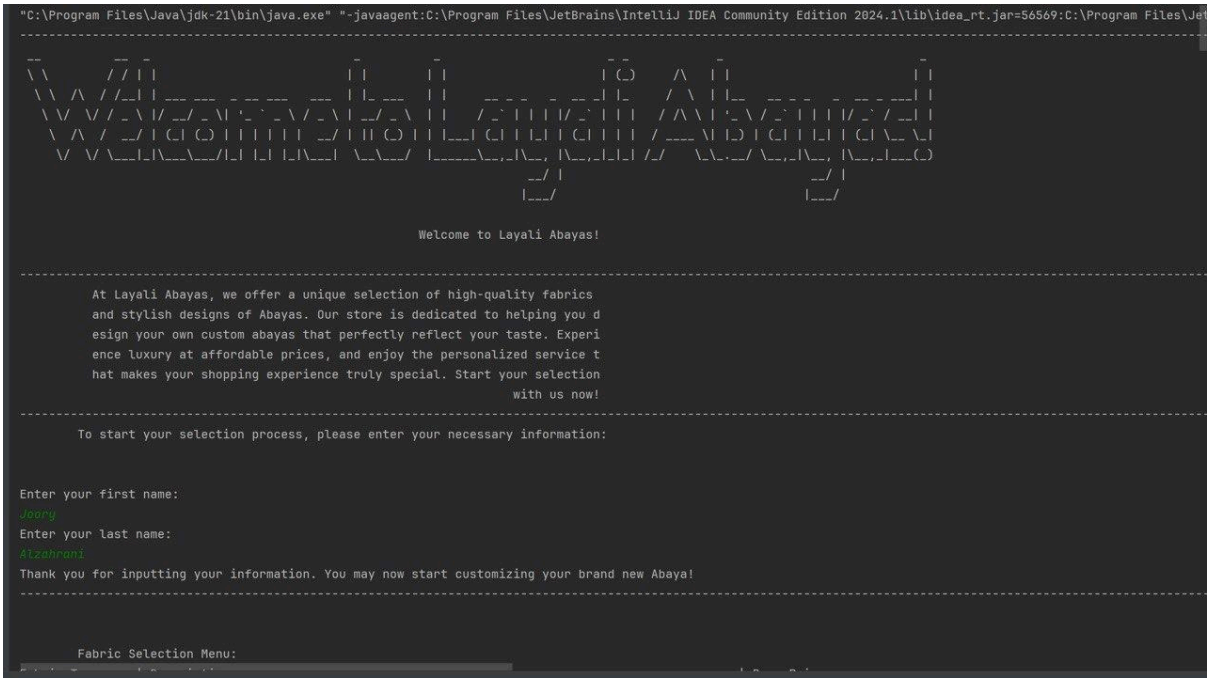
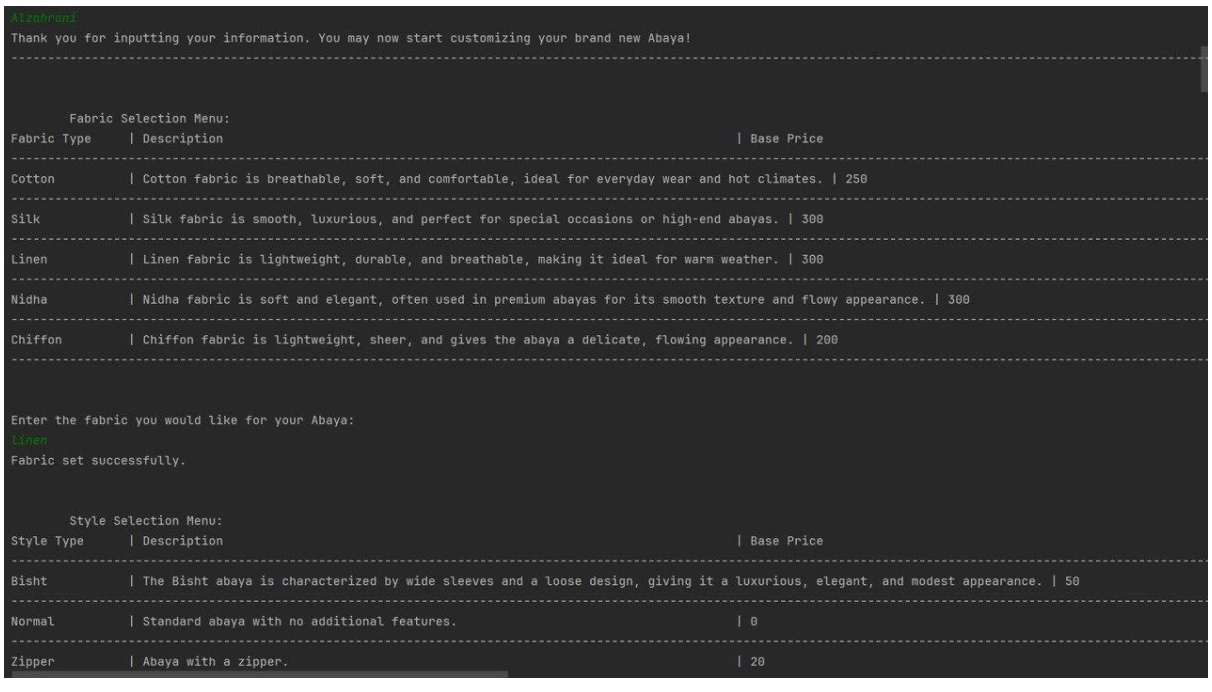
Program outputs:

1. **Welcome screen and user information collection.**



2. **Start of Abaya selection & customization process.**

Displays the fabric, style and colour menus and prompts the user to enter their choices. Includes validation and exception handling for any incorrectly entered values.



```
        Style Selection Menu:
Style Type      | Description                                                
```

```
Color set successfully.
Please enter the size of the Abaya (52, 54, 56, 58, 60):
58
Size set successfully.
